

Programme 1: People, poultry & production

Guillaume Fournié - National Research Institute for Agriculture, Food and the Environment (INRAE), France; RVC, UK.

- **Core hypothesis:** Configurations of production and distribution networks (PDNs)
 - influence the transmission and evolutionary dynamics of zoonotic hazards
 - result from social and economic contexts within which stakeholders operate
- **Aim:** To describe PDN configurations across a spectrum of intensification and production types
 - Roles and interactions along PDNs
 - [Rounds 1 & 2](#)
 - Consumers' demand and preferences
 - External shocks
 - Global capital and industrialisation
 - Chicken population dynamics & actors' mobility
 - Spatial structures
